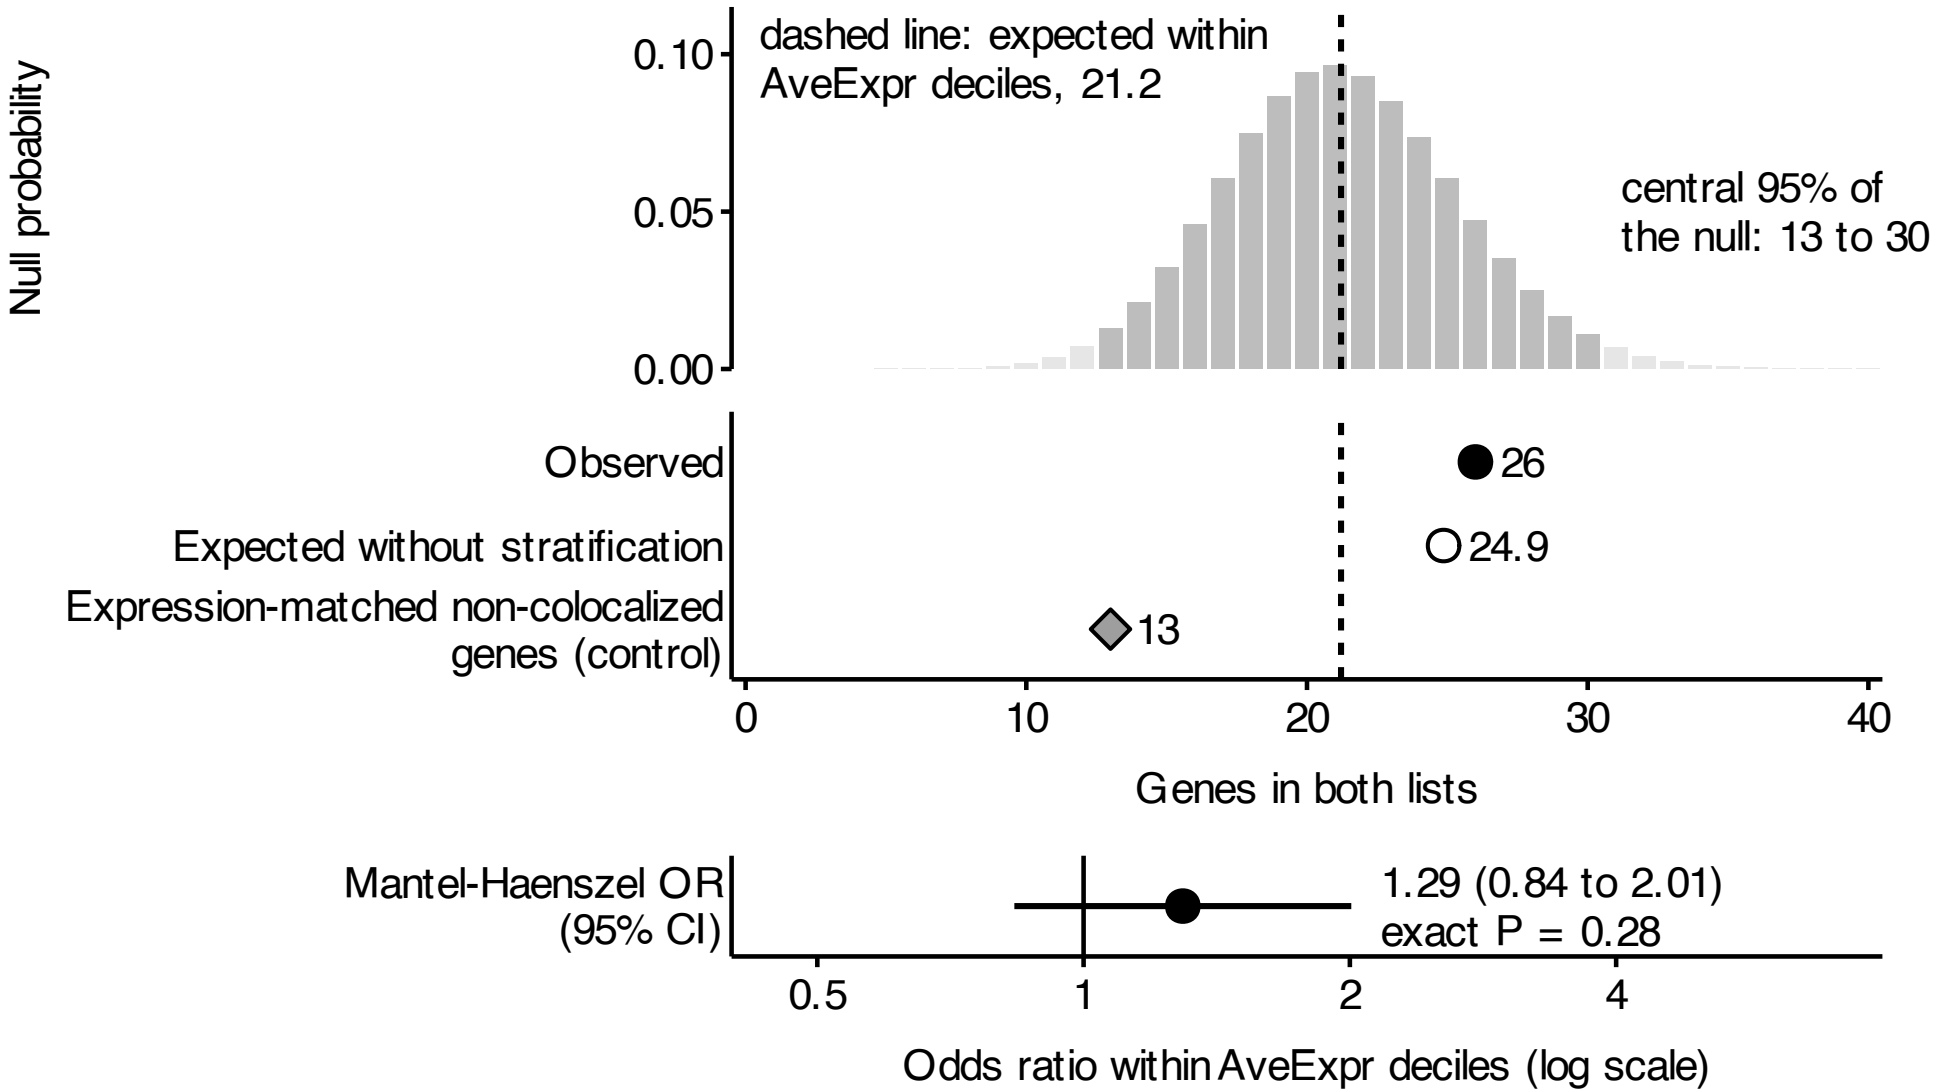
3,769 genes evaluated by multi-signal COLOC (unit: gene)
426 colocalized with liver eQTL (SuSiE PP.H4 > 0.5)
220 disease vs control DEGs (BH q < 0.05, abs log2FC > 0.5; 774 genetic-identity clusters)



Not in this comparison: 935 DEGs without a multi-signal COLOC result;
699 DEGs without a COLOC record (503 lncRNA)
