untested
acquire the missing decisive assay
no RNA call
4,232
no genetic call
9,319
13,551
unresolved
measure the single most decisive missing layer
includes 20 genes with a fine-mapped coding variant:
e.g. PNPLA3, TM6SF2, MTARC1
13,127
established state associated
gene knockdown and rescue
1,129
genetically anchored
allele-aware regulatory editing
400
both supported
allele-aware edit plus gene perturbation
26
0
5,000
10,000
15,000
Genes routed (count, not priority)
n = 28,233 genes; genetic call = liver-trait eQTL colocalization
708 untested genes with one supported call (698 RNA, 10 genetics)
